Medical Notes & Documentation

Admission Summary:

Patient presented with severe dyspnea, high fever (39.8°C), and productive cough of 4-day duration. Clinical examination revealed bilateral lung consolidation with respiratory distress. Initial chest X-ray showed extensive bilateral pneumonia with pleural effusion.

Treatment Course:

Immediate intubation and mechanical ventilation were required due to respiratory failure. Patient received broad-spectrum antibiotics (Meropenem), corticosteroids, and supportive care in ICU. Thoracentesis performed twice for pleural fluid drainage. Gradual improvement noted after 72 hours of intensive treatment.

Discharge Condition:

Patient stable, breathing independently, vital signs within normal limits. Prescribed oral antibiotics and bronchodilators for home care. Follow-up scheduled in 7 days with pulmonology.

Discharge Instructions:

1. Complete antibiotic course as prescribed
2. Use bronchodilator as needed for breathing support
3. Monitor temperature and oxygen saturation daily
4. Return immediately if breathing difficulty recurs
5. Avoid exposure to respiratory irritants
